

# Spring Security

---

Beginner to Guru

Setting Up Development Environment

## Development Environment

- Any OS supporting Java Development - macOS, Windows, or Linux
- 8 GB Ram, 16 GB+ preferred
- Java 11 or higher
  - Oracle Java or OpenJDK
  - Must have JDK Installed

## Build Tools

- Maven version 3.6.0 or higher
  - Ideally installed for command line use

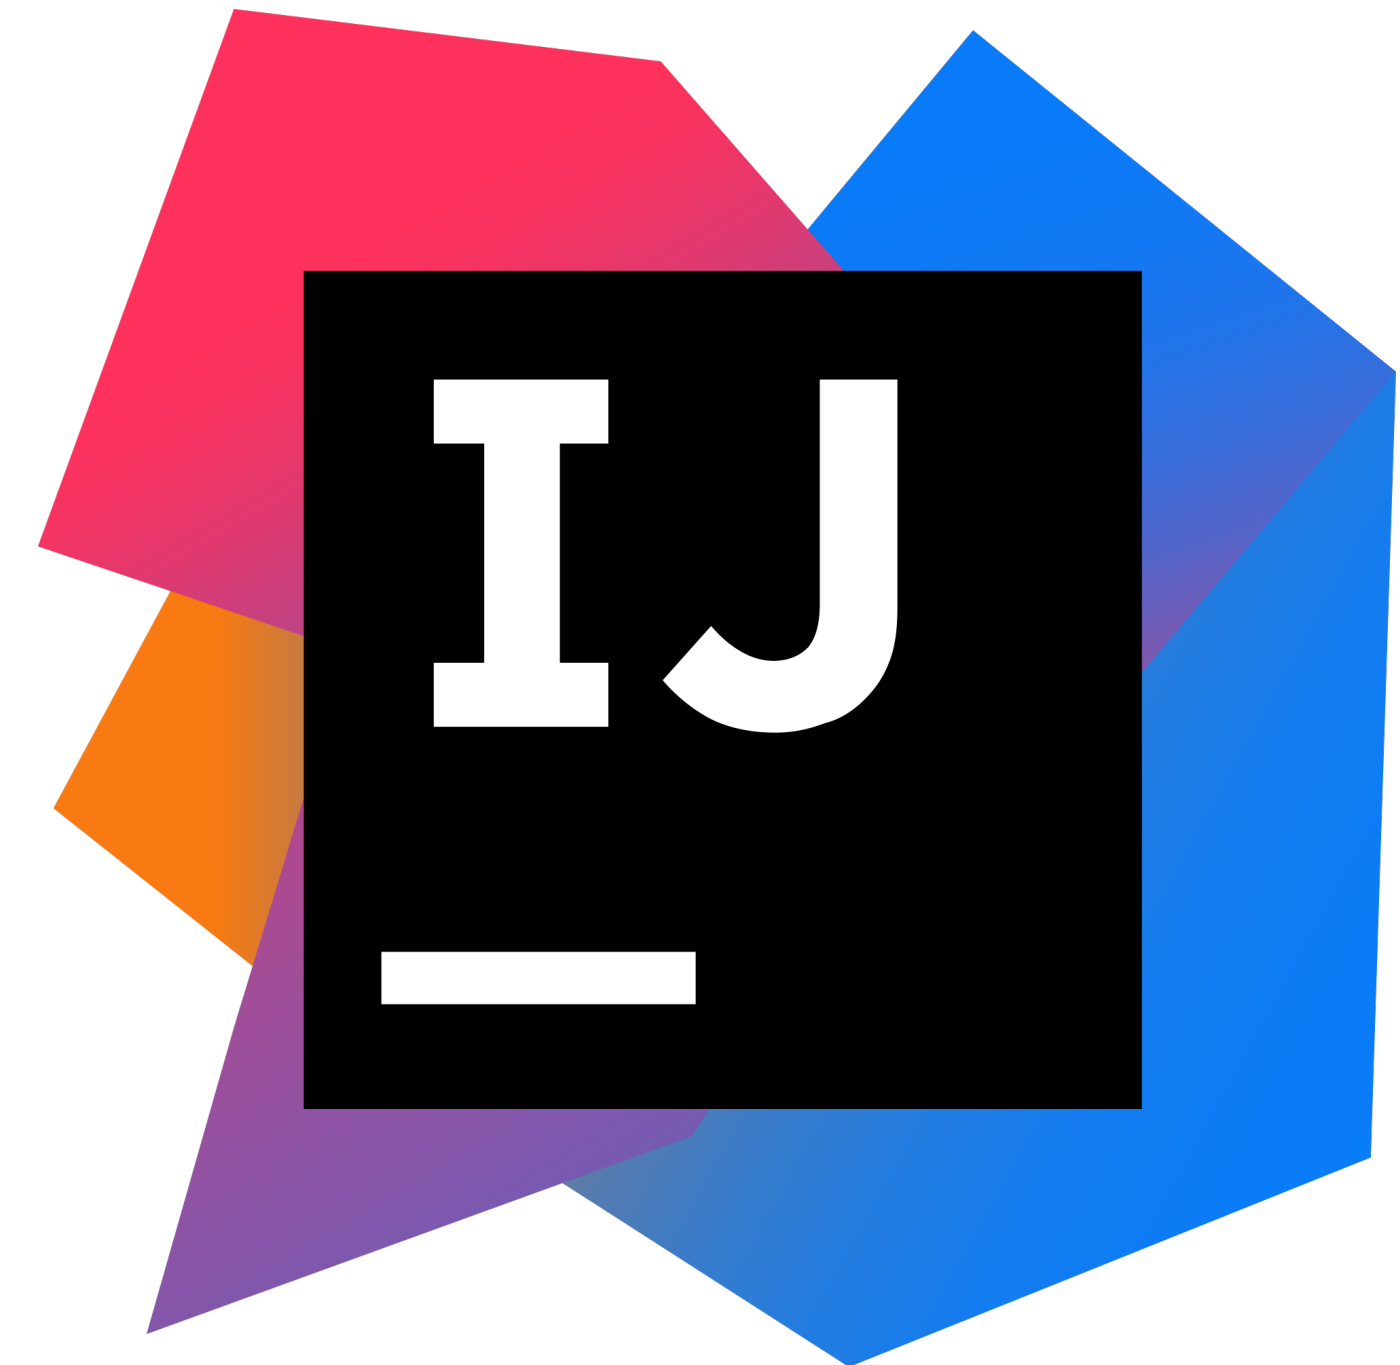

## Verify Your Environment

- Verify Java installed: `java -version`
- Verify Java JDK installed: `javac -version`
- Verify Maven is installed: `mvn -v`

## IDE - IntelliJ Ultimate

- IntelliJ Ultimate is used in course
- Not required
- All source code examples are IDE agnostic
- Free 120 day trial is available to students
- Free IDE Options include: STS, Eclipse, and Netbeans

## Postman - Optional

- Recommended: Postman
- Formerly a Chrome extension
- Handy tool for working with REST APIs
